

Amnesty International Human Rights DAO (HRDAO) Pilot 2026

Amnesty International is building the world's first Human Rights DAO (Decentralised Autonomous Organisation) – a new blockchain digital space where every action for human rights counts. Powered by the leading Cardano blockchain, this pilot reimagines how we fund, coordinate, and govern across our 10-million-strong movement.

This is more than technology. It's a step toward a living movement, co-created by supporters, advocates, and Amnesty International teams worldwide.

Be part of a living, global movement built on trust, action, and innovation.

Why this matters?

Real Impact: Your actions directly fund and strengthen campaigns for justice.

Have a real voice in where Amnesty's resources go.

What is the Pilot?

The HRDAO Pilot is a small-scale prototype where advocates in Aotearoa New Zealand, Australia, Thailand, and Taiwan will test new ways of:

- Recording advocacy actions on a secure digital ledger.
- Earning early recognition through the future Amnesty token.
- Helping model a next-generation engagement and fundraising system that rewards real-world action.

5 Ways to Take Action & Earn

-  **Sign petitions** - add your voice to petitions and digital calls for change.
-  **Show up and join protests** - check in at events or rallies via your mobile app.
-  **Learn and share** - take part in human-rights learning actions: read, watch, and deepen your knowledge.
-  **Contribute your personal human energy** - through small actions: walking, reading, listening.
-  **Support campaigns** - use earned points to back human rights defenders, new ideas, and campaigns that matter to you.

Each action is recorded for recognition and insight; together creating a transparent map of impact that guides how Amnesty evolves participation and incentivisation in the future.

Why get involved?

- Be among the first to earn the future Amnesty token.
- Help test a model of trust, transparency, and empowerment.
- Shape how Amnesty International coordinates advocacy, funding, and governance.
- Join a global team of innovators building a movement that belongs to everyone.

**READY TO BUILD THE
FUTURE OF
HUMAN RIGHTS?
BE AMONG THE FIRST!**

How it works

1. Create Your Account

Sign up via our app in minutes. No tech expertise needed.

2. Take Action

Join campaigns, attend events, learn, and contribute; everything you already do.

3. Earn Tokens

Your contributions are recorded and recognised in the movement.

4. Shape Governance

Use your voice to vote on campaigns and proposals to use your tokens.

Next steps

- You'll receive an invite to create an account in the pilot app.
- The process takes just a few minutes. No technical knowledge needed.
- From there, start completing actions and see your impact grow.

Together we can prototype the future of collective action, one verified act for human rights at a time.

Amnesty International Human Rights DAO (HRDAO) Pilot

A project of **Amnesty International Aotearoa New Zealand** in collaboration with regional Amnesty International offices in Australia, Thailand, and Taiwan.

Blockchain and Web3 – Why They Matter for Human Rights

1. The next evolution of the internet

The first era of the internet let us **read** information.

Social platforms let us **write** and share.

Blockchain adds the missing piece: the ability to **own**.

Instead of one company or government holding the record, blockchain distributes data across many independent computers. Each entry is timestamped, verified, and linked in sequence; making manipulation almost impossible.

Trust is built into the network itself.

2. A shift from control to consent

Traditional digital systems rely on central authorities – banks, states, or tech giants – to confirm who we are, what we own, or what we can do.

Blockchain replaces that dependence with open, shared verification.

It removes the need for intermediaries, letting individuals act directly, transparently, and securely.

Power moves from institutions to people.

3. What “Web3” means

Web3 is the name for this new phase of the internet; where people can read, write, and own in one space.

It enables:

- **Self-custody:** you control your digital identity and assets.
- **Peer-to-peer exchange:** you transact directly with others.
- **Smart contracts:** digital agreements that execute automatically once both parties agree.

It's a way to turn intent and consent into action, without central gatekeepers.

4. Why this matters to Amnesty International

Human rights rely on **trust**, **accountability**, and **autonomy** — all increasingly under threat online.

Decentralised systems help restore those principles by allowing people to:

- Prove authorship or testimony without revealing identity.
- Protect data from manipulation or deletion.
- Support campaigns with transparent, traceable contributions.
- Participate in governance as equals, not as users of a platform.

Blockchain isn't just technology; it's a new architecture of trust.

5. The Amnesty Pilot

The **Human Rights DAO Pilot** tests how blockchain can strengthen participation, transparency, and governance within the Amnesty movement.

Supporters across Aotearoa New Zealand, Australia, Thailand, and Taiwan will experiment with:

- Recording verified human-rights actions.
- Earning recognition through the future Amnesty token.
- Helping shape a model where every verified action — reading, learning, protesting, creating — contributes to collective power.

Together, we're prototyping a movement that owns itself; one that can act freely, transparently, and securely for human rights everywhere.
